Genolier Innovation Network: vocation and strategies

VOCATION

Through the development of laboratory research and clinical activities within Genolier Innovation Hub and the Swiss Medical Network's hospitals, the vocation of the Genolier Innovation Network is to provide its members unique insights to share new visions on biomedical ecosystems, get rid of restrictive approaches in research such as silos, and be proactive in the rising to the challenge of disruptive innovations. In other words, looking ahead by scaling – in a resolute manner – from “think outside the box” up to “think outside the building” mantras.

The collective objective of the Genolier Innovation Network's membership platform is to gather a large number of partners, investors, stakeholders, engineers, scientists, and healthcare teams of any size, belonging to a broad range of disciplines, sectors and organisations, whose the ultimate goal is to foster tight interactions in the fields of Health and Healthcare.

By becoming a member of Genolier Innovation Network, you both secure a direct access to a true cross-fertilization of knowledge and technologies. You also gain a clear vision of what their outcomes are and what capabilities are needed to reap maximum value from health networking. Our network is aimed to be a dynamic ecosystem where innovation thrives, ideas flourish, and collaboration propels us towards a brighter future.

STRATEGIES

- We foster promotion of good medical practice in the development and application of innovative solutions in biomedicine.
- We enable accomplished peers to belong to a large community of stakeholders and strategic leaders, whatever their field of activity in the biomedical ecosystems of the Genolier Innovation Hub, the Swiss Medical Network hospitals including their related entities (e.g., Swiss Visio, Nescens) and their partners.
- We promote interconnections among individuals, specialized units, organisations and companies from various medical and scientific domains and of varying size, in order to bolster concerted actions in the field of Research & Development.
- We bolster the capacities of its community to provide high-level standards of education.

Let's pioneer together a future that is defined by creativity, collaboration and continuous growth!
