Media

25.01.2024, le Journal, Canal Alpha : When diabetes interferes in children's lives

When a disease is declared, it can be a huge struggle for a family. Daily life is turned upside down, and they have to deal with the administrative side of the disease. This is the case for people suffering from type 1 diabetes. This autoimmune disease occurs suddenly, usually in childhood. The pancreas of a child with this form of diabetes stops producing insulin. How can the medical profession help the families affected? We talk to Humberto Delgado Velez, endocrinologist and diabetologist at RHNe.

Conference: Lifestyle as a treatment for type 2 diabetes

Accreditation

Clinique de Genolier

Specialties

Diabetology

Endocrinology
